

MOHAMMAD ABUSAA

Cisco TAC Engineer • Enterprise Switching & SD-WAN

Amman, Jordan | +962 788 231 836 | mohammadabusaa66@gmail.com | [linkedin.com/in/mohammad-abusaa](https://www.linkedin.com/in/mohammad-abusaa) | mohammadabusaa.com

SUMMARY

Cisco TAC Engineer with 2+ years in enterprise network support, currently on the SD-WAN team handling vManage issues, controller upgrades, IPsec/BFD tunnel debugging, OMP routing problems, and policy misconfigurations for global enterprise customers. Built a deep switching foundation across Catalyst 2K–9K platforms — STP convergence, StackWise/VSS failures, IOS-XE upgrades via ISSU/eFSU, High-CPU and TCAM diagnostics — before moving to SD-WAN. Earlier experience in service provider routing at Huawei and enterprise switching at Seven Gate LLC. Huawei ICT Competition World Champion 2025, representing Jordan against 39 countries. CCNP Enterprise certified (ENCOR, ENSDWI) and currently preparing for the CCIE Enterprise Infrastructure.

EXPERIENCE

TAC Engineer (Junior) — SD-WAN Team Mar 2026 – Present

Estarta Solutions · Cisco Systems, Amman, Jordan (Remote)

- Troubleshoot Cisco SD-WAN issues for global enterprise customers — vManage cluster failures, controller upgrades, and edge onboarding failures.
- Debug IPsec and BFD tunnel issues, OMP routing problems, and control/data policy misconfigurations across customer overlays.
- Collaborate with senior engineers and the Cisco BU to identify, document, and escalate software defects on cases needing deeper investigation.

TAC Engineer (Junior) — Switching Team Jan 2026 – Feb 2026

Estarta Solutions · Cisco Systems, Amman, Jordan (On-site)

- Handled switching cases on Catalyst 2K–9K platforms, from routine connectivity issues to critical production outages requiring fast resolution.
- Reproduced customer issues in lab before recommending fixes — StackWise stack failures, SSO/NSF behavior, and STP convergence problems.
- Performed traffic and performance analysis using SPAN, ERSPAN, EPC, and Wireshark, including High-CPU spikes, TCAM exhaustion, and memory diagnostics.
- Carried out IOS-XE upgrades using ISSU and eFSU on Catalyst 9K/6K/4K switches, following proper process to avoid unnecessary customer downtime.

TAC Engineer (Associate) — Switching Team Apr 2025 – Dec 2025

Estarta Solutions · Cisco Systems, Amman, Jordan (On-site)

- Managed real customer cases on Catalyst platforms with increasing independence, owning troubleshooting and customer communication end to end.
- Applied STP, EtherChannel, StackWise, and FHRP knowledge daily across a steadily broader range of issues.

TAC Engineer (Trainee) — Switching Team Jan 2025 – Mar 2025

Estarta Solutions · Cisco Systems, Amman, Jordan (On-site)

- Completed structured training on Catalyst L2/L3 technologies — VLANs, STP/RSTP/MST, EtherChannel, and FHRP.
- Built hands-on troubleshooting skills through lab simulations — ROMMON recovery, password reset, and IOS image repair.
- Learned to communicate clearly with customers during uncertain technical situations, setting expectations and keeping them updated.

IP Networking Engineer — Routing Team Aug 2024 – Oct 2024

Huawei, Amman, Jordan

- Tuned OSPF and BGP configurations on Huawei platforms to improve stability and reduce convergence time for enterprise customers.
- Configured redundancy mechanisms and verified routing paths to confirm traffic would still flow correctly on link or device failure.
- Resolved Layer 3 routing issues in live customer environments, isolating root cause quickly to minimize production impact.

IP Networking Trainee — Routing Team May 2024 – Jul 2024

Huawei, Amman, Jordan

- Configured and troubleshot Huawei routers across lab and production setups, focusing on routing tables and path selection.
- Supported the engineering team in reviewing and validating enterprise routing designs, catching potential issues before production.

Enterprise Switching Trainee — Switching Team Sep 2023 – Jan 2024

Seven Gate LLC, Amman, Jordan

- Configured VLANs, STP, Port Security, and EtherChannel on Cisco and Ruckus switches to support enterprise network requirements.
- Troubleshot connectivity issues and kept the switching environment stable, learning to narrow down problems systematically.

CERTIFICATIONS

- **CCNA** — Cisco Certified Network Associate · Issued Jan 2023 · ID: CSCO14166507
- **CCNP Enterprise — ENCOR (350-401)** — Cisco Certified Specialist, Enterprise Core · Issued Mar 2026 · Valid until 2029
- **CCNP Enterprise — ENSDWI (300-415)** — Cisco Certified Specialist, Enterprise SD-WAN · Issued Apr 2026 · Valid until 2029
- **CCIE Enterprise Infrastructure** — Cisco Certified Internetwork Expert · **IN PROGRESS**

TECHNICAL SKILLS

Enterprise Switching: VLANs, Trunking, Port Security, MAC Learning, ARP/ND, STP/RSTP/MST, EtherChannel (LACP/PagP), REP, StackWise, SSO/NSF

Routing: OSPF, BGP, Static Routing, FHRP (HSRP/VRRP/GLBP), GRE Tunnels, BFD, VRF, CEF Forwarding

Cisco SD-WAN (Viptela): vManage / vSmart / vBond configuration & troubleshooting, vEdge & cEdge onboarding, IPsec/BFD tunnel debugging, OMP, control & data policies, QoS and security policy management, controller upgrades

Platforms & IOS-XE: Catalyst 2K/3K/4K/6K/9K, IOS-XE (BIN/TAR, Install Mode, ISSU/eFSU), ROMMON recovery

Diagnostics & Capture: Wireshark, SPAN/RSPAN/ERSPAN, EPC, MPA, NetFlow, Syslog, High-CPU troubleshooting, TCAM exhaustion analysis, memory diagnostics

Network Services & Automation: DHCP (Snooping/Relay), IGMP Multicast, mDNS, PoE, EEM Scripting, KRON

PROJECTS

Cisco SD-WAN Full Implementation **UNIVERSITY CAPSTONE**

- Designed and deployed a complete Cisco SD-WAN fabric from scratch, simulating a real enterprise multi-site deployment.
- Built the full controller infrastructure — vManage, vSmart, vBond — and integrated edge devices into an existing enterprise network.
- Configured QoS, security, and application-aware routing policies across the overlay for optimal per-site traffic handling.
- Established IPsec tunnels with BFD monitoring between all sites and implemented OMP route distribution with control policies for intelligent path selection and failover.
- Delivered training sessions covering SD-WAN operations, day-to-day management, and troubleshooting procedures.

Enterprise Campus Network Design **LAB PROJECT**

- Built a 3-tier campus architecture — access, distribution, and core — using Cisco Catalyst switches with full redundancy.
- Configured HSRP/VRRP for gateway redundancy, EtherChannel for link aggregation, and OSPF for dynamic routing.
- Deployed VLANs, inter-VLAN routing, DHCP services, port security, and STP tuning for a loop-free L2 topology.

Huawei ICT — Network Track Solution **COMPETITION**

- Led Team Jordan to 1st place at the World Final, designing and deploying a complete enterprise network under competition constraints.
- Implemented multi-vendor enterprise routing with OSPF, BGP, MPLS, and VPN overlays on Huawei switches and routers.
- Competed against 39 countries under strict time pressure with zero error tolerance — ranked #1 globally in the Network Track.

EVE-NG Home Lab Environment **SELF-STUDY**

- Built a full network lab on personal hardware with Cisco vIOS, IOS-XE, and Ubuntu images for multi-platform testing.
- Reproduce real TAC customer scenarios before recommending solutions, and practice ISSU/eFSU upgrades and StackWise failure scenarios safely.

AWARDS & ACHIEVEMENTS

- | | |
|--|--|
| ▪ 1st Prize — World Final , Huawei ICT Competition 2025 | ▪ 2nd Prize — World Final , Huawei ICT Competition 2024 |
| ▪ Grand Prize — ME & Central Asia Final , 2024 | ▪ 3rd Prize — ME & Central Asia Final , 2023 |
| ▪ Grand Prize — Jordan National Final , 2024 | ▪ 1st Prize — Jordan National Final , 2023 |

EDUCATION

Bachelor of Computer Engineering <i>Al-Balqa' Applied University — Salt, Jordan</i>	Feb 2021 – Oct 2024
